

New website connects extreme weather events and climate change

June 18th, 2016

Whether it is in media coverage or in statements by politicians, the connections between our warming planet and extreme weather events are too often ignored or downplayed (or sometimes overplayed).

Those who want to learn more about the global climate models that bolster our understanding of past, recent and future change can face a seemingly impenetrable wall of jargon, formulas and technical terms. Where can you quickly find the context to put a breaking weather event into a solid climate perspective or to get a handle on how global climate models work? Two excellent resources are now available to meet both of these needs.
